DATE : Friday, February 15, 2008

BELL 206 L WITH SNOW BAFFLES

Dear Operator

Following operator reports, advising early filter warning light activation with snow baffles installed, FDC/aerofilter recently tested a configuration that prevents this happening.

This solution will become available as an optional kit, for existing aircraft that operate with snow baffles, the kit will be classed as essential.

Helicopters operating in a climate where snow baffles are not required, will not need this kit, the kit can still be installed at operator discretion.

This change is targeted for installation of production kits 2nd Q 2008.

The kit will be available under SB.FDC.B206L.0009, when placing an order for a kit this number may be used.

This kit includes the following.

1 x Bell 206 L Snow Baffle Kit SB.FDC.B206L.0009 (per helicopter)

Our documents will be updated to reflect this shortly.
